

H.E.P.A. VACUUM CLEANERS

These absolute filter vacuums are designed for industrial plants, hospitals, clean rooms, nuclear plants or wherever dangerous air or dust pollutants exist. Triple filtration process provides 99.99% retention of microorganisms down to 0.12 micron size particles. Absolute filters are designed for areas where high levels of cleanliness are required. The removal of asbestos and other toxic

dust is performed easily and efficiently due to the rugged construction and rigidly inspected filtration system. Includes pre-filters to extend the absolute filter's capabilities to the highest efficiency.

Alternative Solutions to Your Industrial Vacuum Cleaning Needs

Levels of filtration:

1. Certified absolute filter constructed of steel outer casing with filter media made of high strength microfibred glass paper separated by corrugated aluminum sheeting that is entrapped in steel screening for protection against damage to the media (1 included)
2. Intermediary micro filter constructed of two plies of special impaction media with sewn in elastic top to fit around permanent filter (2 included)
3. Totally enclosed double-ply paper filter bags with specially designed fold-over self-adhesive seal patch to prevent the hazardous material from spilling. Bags are stencilled with the OSHA warning for safe handling. (5 included)
- 4 Disposable 6 mil. polyliner with OSHA markings and steel twist wires to properly package asbestos material for removal in accordance with your local EPA regulations. (5 included)
