## AMMONIATED CARPET PRESPRAY

This is an ammoniated product designed to loosen and dissolve "hard to clean" soil and stains from carpets and upholstery. By pre-spraying these difficult areas, the chemical has a longer contact time with the soiled area, which allows the cleaning equipment to do a better job.

It can be used as a spotting agent for carpets and upholstery. It is effective in removing oil, grease, food, and most other common stains.

### **DIRECTIONS:**

**For Prespraying Carpets:** Spray area to be cleaned with a liquid sprayer (garden sprayer). Hold the nozzle about one foot over carpet and apply at full strength in a fine spray or mist. Allow 5-10 minutes contact time before cleaning. More time may be need for tougher stains. Test carpet for color fastness before using.

**For Prespraying Upholstery:** Place furniture to be cleaned on a water-proof sheet before prespraying. Test fabric for color fastness before using to make sure the dye does not bleed or fade. Allow from 5-10 minutes contact time before examining test area. Apply product full strength.
