## DUST MOP CONTROL

**DESCRIPTION:** This is a water based product designed for use on dust mops and cloths. The treatment imparts a positive charge on the fibers of the cloth or mop. This charge acts like a magnet to attract dust particles, which are negatively charged.

It will not harm or streak finishes and will wash out easily when laundered.

It also contains a sanitizer, which will control odors and bacteria.

**DESCRIPTION:** Mop or cloth should be sprayed with the mop treatment until they are damp. It should then be allowed to dry before using. The mop is now ready to use and will do a better job more efficiently than if untreated.

When mop or cloth has been used, shake it well to release the dirt and dust trapped in the fibers.

Treatment should be repeated at least once a week if mops are being used frequently.

When mop or cloth requires cleaning, launder in a machine or by hand using laundry detergent.

The treatment is safe to use on all hard surfaced floors, woodwork, venetian blinds and on dust filters in heating systems or air conditioners.
